

THE STRIDA

Designed by British engineer and designer Mark Sanders in 1985, the Strida bicycle was an attempt to completely rethink the bicycle. It was designed to fold like a baby-buggy into “a walking stick on wheels” so it could easily be carried around.

If you were to design a bike, what would it look like? Who would use it? And what would you call your invention?

Design your bicycle of the future here:

A large, empty rectangular box with a thin grey border, intended for a student to draw their design of a future bicycle. The box occupies most of the page below the introductory text.
